CONDENSING COMMERCIAL GAS TANKLESS WATER HEATER

COMMERCIAL GAS TANKLESS **GX SERIES**

Intuitive Gas Tankless Water Heater

GX Gas Tankless Series was developed specifically for commercial applications which demand ultra efficient water heating. Delivering an energy factor (EF) rating of 0.93 makes the GX model ideal for commercial applications. The heat exchanger is a unique floating stainless steel unwelded design making it the right choice for the maximum reliability and longevity. The GX is your answer for high output and low operating costs.

High Efficiency Long Lasting Design

- 316L stainless steel floating heat exchanger design
- Intuitive digital controls
- Common venting using PVC, CPVC & Polypropylene
- Top mounted plumbing/gas connections
- Energy Star, Ultra low NOx certified on Models GX200 & GX200P
- Convert to LP without changing parts
- Six (6) year Heat Exchanger warranty

No Minimum Flow Rate

Advanced Manifold System

Units can be daisy chained within minutes through our advanced manifold system without the need to buy a separate master controller. Units are connected using a standard phone RJ11 cable, which is included with every Hesco GX tankless model.

Integrated Tankless/Tank System

Built-In tank recirculation capability provides a tank loading circuit without the need for an external pump or aquastat. This feature provides the best of both worlds - the efficiency of tankless with the increased capacity of a storage tank. A simple solution, with simple plumbing that's easy to specify.
